

INTRODUCTION TO EASYTRAK

SIMPLE, COMPREHENSIVE, RELIABLE TIME DATA CAPTURE!

EasyTrak is a comprehensive time capture and analysis system that can include many different modules depending on your requirements. By selecting only those modules that you require and integrating them into a seamless time data gathering and analysis process, EasyTrak makes it easy to know minute by minute where your hourly employee time is going.

receive regular job and activity code updates and make these available to hourly employees at the kiosk for charging time on the shop floor. If existing hardware e.g. security access control system, already gathers time information and basic time capture is sufficient, the EasyTrak system can also use this source of data for simple and economical time and attendance tracking.

From simple on-off total hours tracking for transfer to payroll, through attendance analysis to tracking of time charges at the job and activity level in either stand-alone or integrated mode, EasyTrak can be configured to solve your time tracking needs.

For office workers, e.g. design and engineering personnel, who must also track and charge their time to specific job or customer accounts, the EasyTrak DeskClient is unobtrusive, sitting in the PC System Tray. EasyTrak DeskClient makes it quick and simple for office workers to

Off-the-shelf

Off-the-shelf templates and worksheets make installation easy

worksheets make it painless to plan an installation project schedule and task lists. Starting from existing proven templates, not from scratch, makes it easy to plan out a new EasyTrak installation.

direct their time to different customer accounts and have that time rollup with shopfloor workers' time for reporting, analysis, and payroll.

EasyTrak kiosks are often used with one or more touchscreen, barcode or RFID card input devices to provide easy, accurate reliable data capture. When the EasyTrak kiosk operates in standalone mode, it can be the primary

EasyTrak provides a large library of off-the-shelf reports in on-screen, PDF, spreadsheet or exportable formats, making it easy to quickly gather useful analysis and to transfer data into both manufacturing and payroll systems with no re-keying. Custom reports are easy to design and integrate using the built-in reporting engine.

system for tracking job and activity codes and used to print barcodes or initialise RFID cards directly. On the other hand, when integrated with a manufacturing system, EasyTrak can automatically

EasyTrak also integrates with EPM360, the performance management system from SSI, to provide attendance analysis alongside other employee performance tracking.
