

EASYTRAK SMS

Get operational decision-support information 'pushed' to your mobile device

User Perspective

As an EasyTrak / EPM360 user, specify the events to be notified from your web-browser dashboard, and then, when such an event occurs, you will receive a short text message on your mobile device describing the event. Text messages can normally be received anywhere there is cell-phone coverage, and represent the most direct, reliable and discreet way to receive alerts about situations requiring your action, or of which you need to be aware.

Select only the events about which you need to be notified, and receive short messages on your text-capable device, so that you know exactly what's going on *before* you arrive on site. Use EasyTrak SMS so you know what new orders or assignments have come in without having to check in with the office constantly. By selecting only the events about which *you* need to be notified, the number of alerts is kept low.

IT Management Perspective

If your supervisors need to be notified of important EasyTrak or EPM360 events, such as new orders or 'to-do' items, late arrivals, overtime requests, performance management events, etc., while on the move, subscribe to EasyTrak SMS.

EasyTrak SMS leverages your EPM360 / EasyTrak investment by making the

Mobile Messaging

key operational decision support information available everywhere.

EasyTrak SMS 'pushes' information about emerging situations that may require action to each users' mobile device based on their notification profile. Specifically, when a 'notifiable event' occurs,

EasyTrak SMS checks to see if any authorized user has requested an alert about that condition, and if so sends a short message to the user's mobile device alerting them to the event.

Please check with your service provider - in some cases additional service fees may apply in order to receive text messages.

What are the requirements?

In order to use EasyTrak SMS you need to be an authorized EasyTrak / EPM360 user with valid log in credentials.

You need to have a text-capable device. Most recent cell phones and wireless hand-held devices are suitable.
